#### **DETAILED ACTION**

## Specification

The disclosure is objected to because of the following informalities:

On page 4, bottom line recites a "diffuser 48", whereas page 5, line 5 recites a "diverter 48". Since a diffuser and a diverter are structurally and functionally different, it is not clear what structure applicant intended to be represented by numeral 48.

On page 5, line 3, "an" should read --a--.

On page 6, the sentence which commences in line 1 is incomplete.

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: there is no basis in the specification for the language as recited in claims 6 and 15.

Appropriate correction is required.

#### Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 8 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In line 2, there is no antecedent basis for "the throat". It would appear that claim 8 should depend on claim 3.

Application/Control Number: 10/662,105

Art Unit: 3746

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1 to 8 are rejected under 35 U.S.C. 102(a) as being anticipated by Walton et al (US 6,572,339). Walton et al disclose a pump 14, a first passage 50 connecting a first source of fluid at relatively low pressure and the pump inlet, a second passage 24 connecting a second fluid source and the first passage, and a nozzle 41 which decreases in cross sectional area. The structure downstream of the nozzle exit is readable as a "throat". Inlet ports 92, 94 act as diffusers because they increase the flow area and therefore slow the flow.

Claims 1 to 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Heath et al (US 6,666,655). Heath et al disclose a pump 22, a first passage 42 connecting a first source of fluid at relatively low pressure and the pump inlet, a second passage 50 connecting a second fluid source and the first passage, and a nozzle 48 which decreases in cross sectional area. Structure 38 is readable as a throat and a diffuser downstream of the throat (see fig. 2).

Claims 1 to 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Schaefer et al (US 4,033,706). Schaefer et al disclose a pump 10, a first passage 21 connecting a first source of

Art Unit: 3746

fluid 20 at relatively low pressure and the pump inlet, a second passage 35 connecting a second fluid source and the first passage, and a nozzle 32 which decreases in cross sectional area. A throat and diffuser 33 are located downstream of the nozzle (see fig. 1).

### Allowable Subject Matter

Claims 9 to 17 are allowed.

#### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry relating to patent applications in general should be directed to the Patent Assistance Center at 1-800-786-9199.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Koczo, Jr. whose telephone number is 571-272-4830. The examiner can normally be reached on M-Th; 7:00-3:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anthony D. Stashick can be reached at 571-272-4561. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
